Aspect of the concept	Design questions	Answers
Idea	What is the product or service for? *-- (an identifiable whole from the perspective of users or other stakeholders)*	A web-based audio platform for finding, saving and listening to music, podcasts and audiobooks in one place while keeping the different audio types clearly organised.
	What is the name of the concept?	**Omnisound**
Who	Who is the product or service for?	Students and other users who regularly listen to music, podcasts or audiobooks and want easier access to different types of audio content.
	Who is affected by it (short term/long term)?	Short term: users and project participants. Long term: listeners, content creators, publishers and platform providers.
What	What is the main function?	To let users search, save, organise and resume different types of audio content from one interface.
	What is the most important content?	Music, podcasts and audiobooks with titles, creators, cover images, categories, saved items and listening progress.
When and where	In which social contexts and in which physical environments can the product or service be used?	For personal listening at home, while studying, travelling, exercising or relaxing. It is designed primarily for use through a web browser on personal devices.
How	What principles does the product or service follow?	**Visibility:** important content and controls are easy to find. **Feedback:** actions such as saving or playing content show clear results. **Consistency:** similar controls work in similar ways. **Affordance:** buttons and controls clearly suggest how they can be used.
	What qualities are sought?	Effective, efficient, easy to learn, organised, helpful and satisfying to use without feeling cluttered.
	What types (or kinds) of design options are available?	Separate category tabs for Music, Podcasts and Audiobooks; a mixed feed with filters; card or list layouts; shared search; a unified library; and a Continue Listening section.
Why	Why is the product or service used?	To reduce the need to switch between several audio apps and make it easier to find, save and return to wanted audio content.
	What problem or question does it answer?	How can different types of audio content be combined in one interface without making navigation confusing or overcrowded?
Consequences	How are people, the environment, society, or the environment affected by it?	It can make listening more convenient and organised, but poor accessibility or excessive content could exclude users. Privacy, copyright, content rights and the environmental impact of digital streaming would also need to be considered.
