# Omnisound

## User-Centred Design of a Unified Audio Interface

Group 1 DT168G / IU127G 19 October 2026

Obid Alrhman Aljabi
Yacoub Dawli
Sarshar Chavoshi Rad

# The idea

## Music
## Podcasts
## Audiobooks

One interface, clear categories

**Search**

Find audio across the catalogue

**Library**

Return to saved content

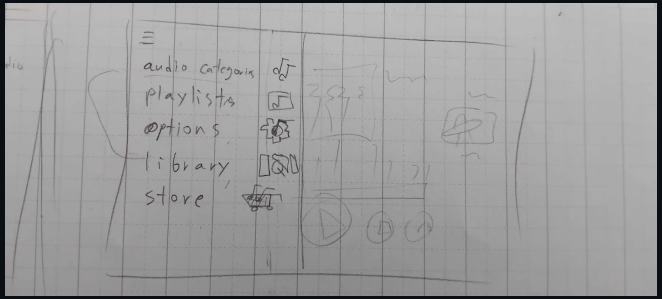

**Continue Listening**

Pick up unfinished audio

An HCI interface prototype with a sample catalogue

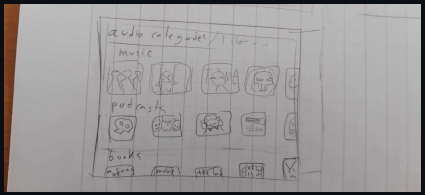

# Early designs

**Navigation and content layout**

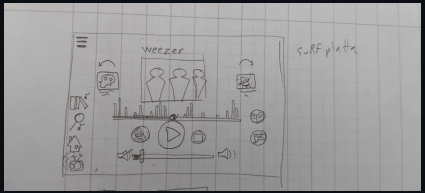

We explored different ways to organise audio before building the prototype.

**Audio categories**

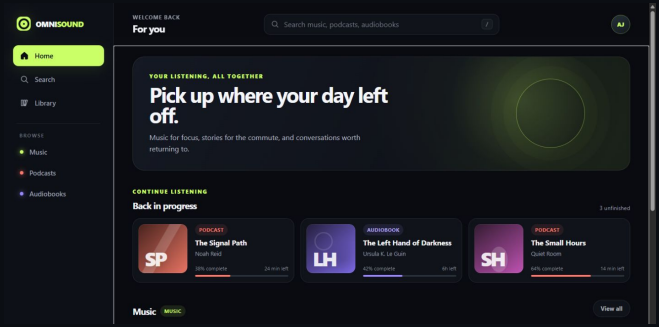

**Player layout**

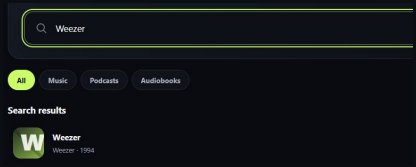

# V1 prototype

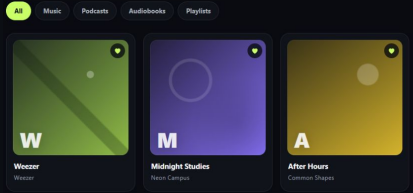

## Home

## Search

## Library

Find Weezer, save it, check Library.

Resume an unfinished audiobook.

# How we tested

## 2 rounds

3 participants per round

Different people in each round

Think aloud

Task times, routes and comments

### Three tasks each

1. Find and save Weezer, then check Library
2. Resume an unfinished audiobook
3. Browse podcasts

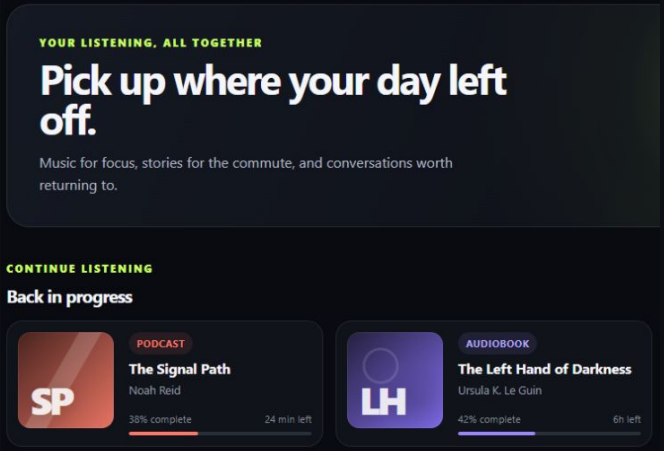

# First test findings

**9/9**

V1 tasks completed

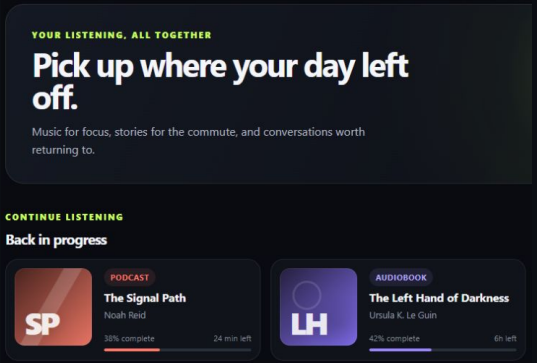

**2 of 3** overlooked
Continue Listening

**1** brief pause
at Save

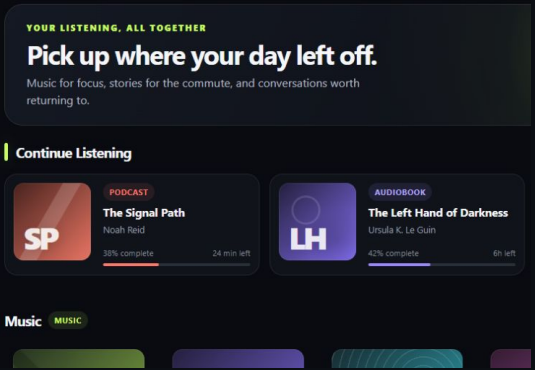

# What we changed in V2

## V1 Home

## V2 Home

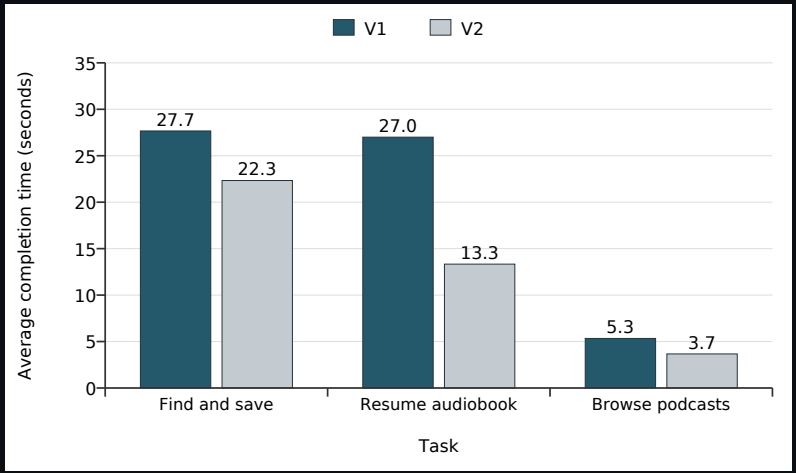

Smaller banner and clearer Continue Listening

Stronger Save/Saved states, with the same navigation and categories

# Second test results

Different participants in each round. Observed differences do not prove cause and effect.

Task completion

**V1 9/9**
**V2 9/9**

Direct Continue Listening

**V1 1/3** **V2 3/3**

Mean resume time

**V1 27.0 s**
**V2 13.3 s**

# Conclusion

## Testing with users helped us make practical design decisions.

A working prototype with connected tasks

A focused redesign of the areas users missed

Next: more participants and mobile testing
